HR Agency – Super Specialist for Remote Workforce Solutions

Our team is expert and experienced to provide the best sourcing of highly skilled IT professionals from Asia and Africa. We will make the job so easy by providing end-to-end management of remote teams for optimal productivity with cutting edge technology

.

We have customised remote work strategies to align with clients business goals. Our Cost-Effective global staffing access to countries with competitive wage expectations. Allows our client companies in significant overhead cost reduction while maintaining quality work standards.

We have advanced remote infrastructure to facilitate the setup of robust IT solutions to support remote operations. We are ensuring the most secured data security and also intellectual property protection of our clients across borders.

For remote work compliance we are continuously navigating international labour laws and ensuring compliance with hiring regulations. With our extended research and technology we are managing payroll and international payments effectively for client organisations.

We have developed several training and Onboarding programs to integrate remote hires effectively. With our Artificial intelligence training module we offer monthly online training initiatives to enhance skills and productivity without in-person interaction.

Technology & Innovation

At HR Global, we pride ourselves on staying at the forefront of technology. Our Intelligent Health Management System (IHMS) integrates IoT and AI to provide cutting-edge solutions for employee health and organisational efficiency.

IHMS

(IoT based Health & performance management system)

A unique IoT-based system utilising wearable devices such as watches and rings to monitor vital health metrics like blood pressure, heart rate, body temperature, and oxygen levels.

Integration & Predictive Analysis

By leveraging data from IHMS, we utilise artificial intelligence, machine learning, and predictive analysis to comply with health improvements with work performance. Our deep learning modules are enriched with medical insights, HR expertise, Employee performance & also Our AI models are trained with the research data of the relation between Medical problems and employee performance.

With regular updated training and input of regular employee data the system will soon become self-sufficient and able to take logical and precisely correct decisions to enhance employees physical, mental and performance ability. The whole automated & intelligent system will work as virtual manager with 24 hours service with zero% biased of emotions or other biological reasons.

Infrastructure & Security

Cloud-Based Infrastructure

Our scalable cloud-based solutions manage the extensive data produced by IHMS efficiently.

Reliability and Security

We have robust data redundancy and backup systems to ensure data resilience. Regular security audits help us identify and address potential vulnerabilities.

APIs and Integration

Developed APIs allow seamless integration of IHMS with existing HR systems and third-party applications.

Training Programs

We offer comprehensive training programs on organisational development, designed to empower employees and enhance organisational capabilities. These programs provide insights into using IHMS devices effectively and understanding system functionalities, supported by our dedicated 24-hour customer service team.

Employee & Client Support

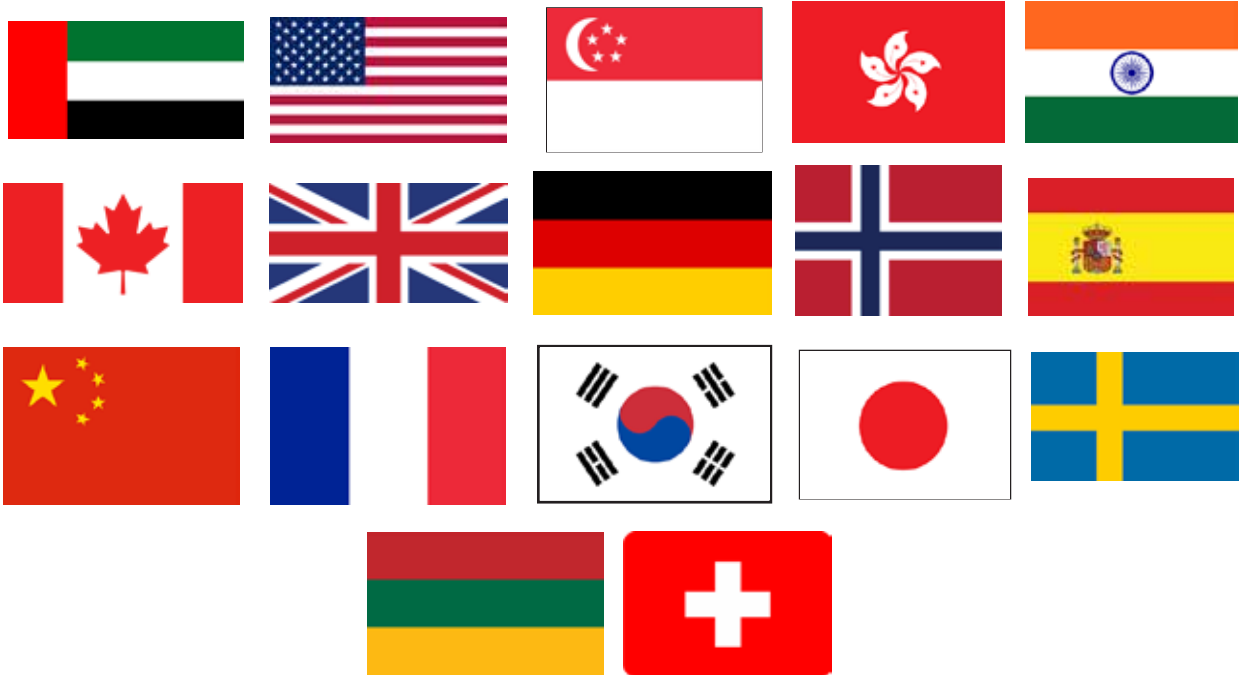

Comprehensive training

Comprehensive training is provided to our clients on how to effectively use IHMS devices and understand the system, supported by our 24-hour customer care service.

Innovative Future

Our AI system will soon be able to learn how Managers make decisions, helping to reduce biases and improve efficiency. We aim to predict health trends and their impact on employee performance, creating a supportive work environment.

We have served more than 200 companies in the last 12 years.
